

Bringing Aurora into the classroom tool

Three ways to take the app from "a nice generic tool" to "unmistakably ours" — keeping the glass, adding the brand.

WHAT'S IN THE BRAND KIT

The Aurora palette, pulled from the logo

Sampled straight from Id Visual e aplicações in the shared Drive — the mark, the horizontal lockup, the gradient backgrounds, the sun / ray / triangle elements, and the BT Geometric type.

Typography

The wordmark is set in **BT Geometric** (in the FONTES folder). On the web the closest free match is **Poppins** — geometric, same wide even caps. Body text stays **Inter**, which the app already uses.

Display Poppins · 600–800 · headings, labels, nav

Body Inter · 400–500 · everything read at length

Labels Poppins · uppercase · +0.14em tracking

Assets ready to drop in

- Horizontal lockup — full colour & white, transparent PNG (navbar)
- Symbol only — the mountain / "A" mark (favicon, watermark)
- 4 gradient backgrounds, gold → coral
- Sun, ray-lines and triangle elements in every brand colour

DIRECTION A

Aurora Night

The deep-indigo world from the brand, used in full. The gradient becomes the ground, the mark sits faint in the corner, coral drives every action. Most distinctly Aurora — and it lines up with the fullscreen activity screens, which are already dark.

Keeps

- The glass cards and blur
- The per-activity layout, untouched
- Unsplash photos on activity screens

Changes

- Photo grounds → the Aurora gradient
- Blue accent → coral #FC6840
- Glass tint → indigo #271D62
- Logo in the navbar; mark as a faint watermark

matches activity screens

bigger job

DIRECTION B

Sunrise

The warm half of the palette — gold into coral into magenta — the way the Instagram feed feels. Lighter, friendlier, energetic. Glass panels go from smoked to frosted-white. Good if the team wants "welcoming" over "premium-dark".

Keeps

- The glass idea — now frosted white
- All layouts and controls

Changes

- Ground → warm gradient (gold → coral → magenta)
- Text and accents → deep magenta / indigo for contrast
- Badges → solid indigo instead of gradient

DIRECTION C

Keep & Badge

The one to ship this week. Leave today's photo-and-glass look almost exactly as it is — just add the logo, switch the accent from blue to Aurora coral, warm the glass toward indigo, and drop the mark in as a watermark. An hour of work; buys time to decide between A and B properly.

Changes — small

- Logo in the navbar (white lockup)
- Accent blue → coral #FC6840
- Glass tint warm-brown → indigo
- Mark watermark, bottom-right
- Favicon → the Aurora symbol

Untouched

- The current background photo
- Every layout, every control
- Font (Inter) — Poppins is a later step

ship first

~1 hour

low risk

THE OTHER REQUEST

One Display panel, everywhere

Right now text size and colour live in a different spot on every activity, and reset each time you open one. Fold them into a single panel — the same on the navbar and inside every activity — and remember the choice.

Poppins

Lexend

Lexend is tuned for reading — useful for lower levels and younger students.

Set once. It sticks across activities and across sessions, per teacher.

Suggested path

1 Is it unprofessional?

No — it's clean and it works. It's just unbranded: nothing on screen says Aurora. That's the whole gap, and it's the easy kind to close.

2 Ship Direction C now

Logo, coral accent, indigo glass, watermark, favicon. Low risk, about an hour. The team sees Aurora on screen this week.

3 Pick A or B as the real identity

React to these mockups as a group, mix if you want, then implement the chosen one once — same as the shell overhaul we did before (mock in an artifact, converge, build once).

4 Build the Display panel as its own piece

Independent of the look. Unify the control, add brightness + font, and make it remember the setting.
